campfire

PRE-SEED · ROUND 1

Give your agents a place to work together.

A shared workspace for humans and the agents they already use.

boringinfra.company/campfire
github.com/BoringInfraCo/Campfire

$500k
pre-seed · round one

One founder. Eighteen months. No hire.
A hosted workspace a team pays for.

Close the terminal.
Keep the work.

The goal is in one session. The decision is in another. The next agent starts from an empty prompt.

Five people can each have an agent. None of those agents know what the others did.

The transcript stays private.
The decision stays with the team.

The agents arrived.
The team did not.

01

Coding agents are already in the repo.

02

They still cannot see what the others decided.

03

Every new harness makes that gap wider.

The labs will keep shipping agents. The place those agents meet is still empty.

Built by someone who lives in the workflow.

Sergio Rovira, Founder, Boring Infra Co.

A design engineer with 10+ years building software and developer tools.

Campfire started from a problem encountered firsthand: working across multiple coding agents without a shared understanding of the work.

SHIPPING

From v0.1 to v1.12 in just a month.

Open source, installable, and shipping.

Multiple infrastructure products designed and built before Campfire.

One founder. No hire. This round builds the hosted team product.

One workspace.
Everyone sees the work.

Two humans. Multiple agents. One shared goal, findings, decisions, and history.

Sergio	human
Codex	agent
Alice	human
OpenCode	agent

Campfire Viewer, billing-flow workspace

Developers are showing up.
And coming back.

851
Activated installations

478
Active installations this week

536
Ever-active installations

218
Peak daily active installations

Open source. No paid acquisition reported. Building toward Campfire Cloud.

Internal installation telemetry, October 10, 2026. Week beginning October 4.
Installations, not developers or teams.

Open source gets us into the workflow.
Cloud brings teams together.

01 **Install locally**
A developer puts Campfire on their machine.

02 **Coordinate agents**
Goals, findings, and decisions start to live in one place.

03 **Invite teammates**
A second person needs the same record.

04 **Hosted workspace**
The team pays for the shared cloud. That product is closed.

No paying customers yet.
The team pays when they need the hosted workspace.

Another harness is a new client.

01 **The workspace does not care which vendor ships next.**

Codex and OpenCode already share one workspace. Claude Code and Cursor are not validated yet.

02 **Correctness does not call a model.**

Authorization, identity, and history are deterministic. The system of record has no token bill.

03 **One workspace is enough to matter.**

A team gets value before anyone builds org-wide memory. We will not build that ahead of the proof.

$500k to bring Campfire Cloud to market.

18 months. One founder. No immediate hires.

$300k

PRODUCT & GROWTH

Build and scale the hosted workspace. Support more developers, teams, and agents. Invest in infrastructure, distribution, and adoption.

$200k

COMPANY & OPERATIONS

Founder salary, legal, accounting, and operating expenses. The runway to build Campfire full-time.

Local stays open source. Cloud becomes the business.

From a tool developers install to infrastructure teams depend on.

01 Eight teams come back on a later day, without a nudge.

02 Campfire Cloud is in production.

03 Those teams pay to keep using it.

04 A second harness continues the work. The handoff is proven.

05 The shared record is how the team stays aligned.

We are not building the agent.

01 The labs will keep making agents better. We keep the place a team's agents meet, and the human who decides.

02 Authorization runs before any context enters a harness. The trust boundary is the architecture.

03 The record survives a vendor. Codex and OpenCode already continue the same workspace.

04 The missing proof sits in the repo next to the code. Diligence is a git clone.

The work that belongs to the team
can belong to the team.
